To whom it may concern,

This is Dr. Najla Althuniyan. I am an assistant professor at Prince Sultan University (PSU) in Riyadh, Saudi Arabia. I have taught computer science courses for students in the College of Computer and Information Sciences and the College of Business Administration for almost thirteen years.
One of the courses I teach is Data Structures and Algorithms, offered to sophomore students at PSU. This course is academically rigorous due to its challenging content. On average, approximately 40% of students do not pass this course each semester. Among the students I have taught in this course was Miss Shoug Fawaz Abdullah AlOmran (ID: 223410392). I have had the pleasure of instructing her in this subject. She has demonstrated ambition and curiosity to learn this material and extend her knowledge beyond it. She distinguishes herself from most students I have taught in this class and is eager to maximize her learning opportunities. Her developed project was exceptional and ranked above expectations among the 70 students I instructed that semester. She endeavors to achieve academic and knowledge excellence.

I would be happy to discuss more of Miss Shoug in the classroom. You can reach me by email at nthuniyan@psu.edu.sa or by phone at [redacted]

Sincerest regards,
